

1                   **ABSTRACT OF THE DISCLOSURE**

2                   A charger adapter is composed of an adapter and a charger detachably  
3                   and electrically mounted on the adapter. The adapter has a plug formed at a  
4                   bottom surface thereof. A tongue is formed at an upper surface of the adapter.  
5                   Two first elongated holes are defined through the tongue. Two teeth are  
6                   respectively and elastically protruded from the first elongated holes and  
7                   electrically connected with the connecting member. The charger has a notch  
8                   defined at a bottom surface thereof for receiving the tongue. Two second  
9                   elongated holes are defined through the notch. Two contacts are respectively  
10                  provided in the second elongated holes and corresponding to the teeth. A  
11                  chamber is defined at an upper surface of the charger.
